

## General Information:

**NO NAIL** is a pure cyanoacrylate instant setting glue. It performs better than most other market brands because it is not diluted. **NO NAIL** works extremely well with urethane plastic products, wood, any fibrous and/or porous material. **NO NAILs'** weatherability is moisture resistant and ages well in heat.

**NO NAIL** requires a close fitting, clean, dry and oil free bonding surface. A single bead of glue on one bonding surface side is all that is necessary. For added strength caulk edges or seam with a bead of glue and cure with **NO NAIL KICKER**. Cure time using **NO NAIL KICKER** is 10 seconds (without 30-60 seconds), full cure time is obtained within 24 hours. To de-bound **NO NAIL** use an acetone solvent.

**NO NAIL** has a shelf life of 6 months if it is stored at not more than 70 degree Fahrenheit. Unopened bottles may be refrigerated to promote a longer shelf life.

One 4 ounce bottle will produce a 1/8" wide bead of glue approximately 90 feet.

**NO NAIL KICKER** is used to accelerate bond and cure **NO NAIL** glue instantly.

Spray a light mist to the opposing surface and let dry, bond will then take instantly when mating parts together. (Using **NO NAIL KICKER** directly on **NO NAIL GLUE** will cure instantly.)

**NO NAIL KICKER** is extremely flammable and must be stored according to fire safety precautions. Lid must be kept tightly closed to avoid evaporation. Does not need to be refrigerated for a longer shelf life.

One 2 ounce bottle of **NO NAIL KICKER** should last as long as a 4 ounce bottle of **NO NAIL GLUE** if used sparingly.

### NO NAIL TECHNICAL SPECIFICATIONS

2500 CPS Viscosity  
meets MIL-A-46050-C Type II Class 3 Standards  
service temperature range is -144 to 180 degrees Fahrenheit  
melting point is 368 degrees Fahrenheit  
softening point is 301 degrees Fahrenheit  
hardness using Rockwell Test is M72  
tensile strength using ASTM D-2095 Test is 4000

### NO NAIL

4 ounce bottle  
order #ACG04

### KICKER

2 ounce bottle  
order #ACA02
